ABSTRACT

2	The invention is a method and system for aligning a properly skilled external
3	work force with a workflow task for a particular while maintaining control and quality
4	assurance over the work product created for the business by the external workforce.
5	The system enables the assignment and distribution of work via a computer network
6	from a business customer having a particular task that requires a particular skill set,
7	matching that to one or more agents over a computer network, and collecting and

assimilating the at least a portion of the final work product for retrieval by the
